Update to clinical guideline, Central (Hip or Spine) Bone Density Measurement and Screening for Vertebral Fractures Using Dual Energy X-Ray Absorptiometry (CG-MED-39), was published February 14, 2018.

Effective February 14, 2018, this clinical guideline will apply to Medicaid lines of business.

The clinical indication section specific to female screening of osteoporosis was revised to reflect that an initial (baseline) central (hip or spine) bone density measurement is considered medically necessary when conducted in postmenopausal individuals 65 years of age or older.

The guideline also identifies other clinical indications when initial and repeat central bone mineral density measurements are medically necessary.
